Professional Summary

Pre-final year Computer Science undergraduate specializing in Full-Stack Development and AI/ML. Experienced in building real-time, AI-powered applications and computer vision systems, with a strong focus on problem-solving and practical implementation. Actively participates in hackathons and seeks opportunities in software development and intelligent systems.

Education

JSS Academy of Technical Education, Bengaluru Sep 2023 – 2027
B.E. in Computer Science and Engineering CGPA: 8.56(upto 5th semester)

Sri Kumaran Children's Home Composite Junior College, Bengaluru
Pre-University Education Percentage: 81%

Projects

1.VisionMate — AI-Powered Assistive Smart Glasses · Hackathon Project

- Built a real-time computer vision system for visually impaired users using YOLOv8 for object detection and InsightFace for face recognition.
- Designed a distributed architecture integrating Raspberry Pi (camera + sensors), laptop-based ML server, and a mobile app for live tracking and alerts.
- Implemented features like object memory, voice commands, GPS navigation, obstacle detection, and priority-based audio feedback.

Tech: Python, YOLOv8, InsightFace, OpenCV, Raspberry Pi, React Native

2.Hackathon Simulator & Evaluation Platform — AI System

- Built an AI-powered platform to evaluate project ideas and analyze GitHub repositories, generating detailed performance reports.
- Integrated Llama 3.2 via Ollama to enable automated scoring, repository insights, and intelligent feedback generation.

Tech: Python, React, Node.js, Llama 3.2 (Ollama), MongoDB

3.Ozark Sentinel — Blockchain-Based Financial Fraud Detection

- Developed a decentralized Anti-Money Laundering (AML) platform using graph-based analysis to detect money mules, fraud rings, and suspicious transaction patterns from banking data.
- Implemented multi-pattern fraud detection using NetworkX (cycle detection, smurfing, shell networks) with a risk scoring system and real-time visualization of transaction networks.
- Integrated Algorand blockchain to permanently flag fraudulent accounts using Soul Bound Tokens and leveraged IPFS for secure, immutable audit trails.

Tech: Python, NetworkX, FastAPI, Algorand, IPFS, React

Technical Skills

Languages: Python, Java

Frameworks: React.js, Node.js (Express.js)

Blockchain: Algorand, PyTeal, Smart Contracts

AI & Computer Vision: OpenCV, Scikit-learn, Llama 3.2 (Ollama)

Databases & Tools: MongoDB, Pandas, NumPy, Git, IoT (Raspberry Pi/Sensors)

Hobbies & Interests

- National Hackathon Participant – Participated in multiple AI and Blockchain hackathons.
- Table Tennis-VTU Silver Medalist(2x)
